

Security Categories and Acronyms

- Endpoint & Network Security
- Identity & Access Management (IAM)
- Threat Intelligence, Monitoring & Response
- Cloud & Application Security
- Infrastructure, Data & Asset Protection
- Governance & Risk
- Other Security Functions

Endpoint & Network Security

Acronym	Full Name	Description
EDR	Endpoint Detection and Response	Detects and responds to threats on endpoints like servers or laptops.
XDR	Extended Detection and Response	Correlates data across endpoint, network, cloud for unified response.
NDR	Network Detection and Response	Detects anomalies and threats via network traffic analysis.
NGAV	Next-Gen Antivirus	AI-based antivirus beyond signature matching.
IDS	Intrusion Detection System	Detects malicious activity and policy violations.
IPS	Intrusion Prevention System	Detects and actively blocks malicious traffic.

Identity & Access Management (IAM)

Acronym	Full Name	Description
IAM	Identity and Access Management	Manages user access and roles.
PAM	Privileged Access Management	Controls/administers elevated access rights.
MFA	Multi-Factor Authentication	Requires multiple verification methods.
SSO	Single Sign-On	One login for multiple systems/apps.
IdP	Identity Provider	Authenticates users for SSO/SAML/OIDC.

Threat Intelligence, Monitoring & Response

Acronym	Full Name	Description
SIEM	Security Information and Event Mgmt	Collects, correlates, analyzes logs for security insights.

Acronym	Full Name	Description
SOAR	Security Orchestration, Automation...	Automates security workflows and incident response.
TIP	Threat Intelligence Platform	Aggregates and enriches threat data from multiple sources.
UEBA	User and Entity Behavior Analytics	Detects anomalies based on user and entity behavior patterns.

Cloud & Application Security

Acronym	Full Name	Description
CASB	Cloud Access Security Broker	Enforces policies for cloud resource access.
CSPM	Cloud Security Posture Management	Identifies misconfigurations in cloud infrastructure.
CWPP	Cloud Workload Protection Platform	Protects VMs, containers, and serverless workloads.
CNAPP	Cloud-Native App Protection Platform	Combines CSPM and CWPP into one platform.
WAF	Web Application Firewall	Blocks web-based attacks (e.g. XSS, SQLi).
DAST	Dynamic Application Security Testing	Tests apps while running for vulnerabilities.
SAST	Static Application Security Testing	Analyzes source code for flaws.
RASP	Runtime Application Self-Protection	Monitors and protects apps during runtime.

Infrastructure, Data & Asset Protection

Acronym	Full Name	Description
VMS	Vulnerability Management System	Scans and tracks software/hardware vulnerabilities.
NAC	Network Access Control	Controls device access to network resources.
DLP	Data Loss Prevention	Prevents unauthorized data leakage.
EASM	External Attack Surface Management	Identifies exposed digital assets for remediation.

Governance & Risk

Acronym	Full Name	Description
GRC	Governance, Risk & Compliance	Framework for managing IT risk and regulatory alignment.
DRM	Digital Rights Management	Controls usage and access to digital content.
PKI	Public Key Infrastructure	Enables encryption, signatures, certificates.

Other Security Functions

Acronym	Full Name	Description
BAS	Breach and Attack Simulation	Emulates attacks to test detection/response capabilities.
ZTA	Zero Trust Architecture	Requires continuous verification for all users and devices.
